JAKE 350

The **JAKE 350** has been designed for cranes with 3-point fastening and gross lift moment up to 45 kNm¹. For heavier cranes the choice is **JAKE 350 HD**. The crane can be with or without hydraulic legs and may also be equipped with a light harvester head.

The **JAKE 350**, compared to a trailer mounted crane, increases the payload of the trailer as the weight of the crane is not on the load but on the tractor, increasing the pulling power of the tractor as well. The tractor equipped with a **JAKE Boom Support** gains the pulling power even more by sharing the crane weight partly onto the front wheels.

The **JAKE 350** makes using the crane versatile as the crane mounted on the tractor can be combined with other devices and equipment connected to a 3-point linkage and/or a trailer hitch. Some limitations may come, however, the reason is usually the construction of the crane, not the **JAKE 350**.

¹ Choose JAKE 354 HD for Valtra N4 and T4.
