JAKE 800

The **JAKE 800** has been designed to mount a flange fastened crane with gross lift moment under 80 kNm and outreach under 10,0 metres on a tractor*. The **JAKE 800** also suits to a heavy harvester head and a mulcher use. When a tilt function is demanded, choose the **JAKE 900 Tilt** designed especially for a harvester use but giving benefits to a forwarder crane, too.

The **JAKE 800**, compared to a trailer mounted crane, increases the payload of the trailer as the weight of the crane is not on the load but on the tractor, increasing the pulling power of the tractor as well. The tractor equipped with a **JAKE Boom Support** gains the pulling power even more by sharing the crane weight partly onto the front wheels.

The **JAKE 800** makes using the crane versatile as the crane mounted on the tractor can be combined with other devices connected to a 3-point linkage and a trailer hitch usually with no limits (except for parallel cranes).

* Choose JAKE 804 or 904 for Valtra N4 and T4.
