JAKE 900

The **JAKE 900** has been designed for flange fastened cranes with 80-130 kNm gross lift moment and under 12 metres outreach. The **JAKE 900** also suits heavy harvester and crusher use with parallel and forwarder cranes. When a tilt function is demanded, choose the **JAKE 900 Tilt** designed especially for a harvester use but giving benefits to a forwarder crane, too.

The **JAKE 900**, compared to a trailer mounted crane, increases the payload of the trailer as the weight of the crane is not on the load but on the tractor, increasing the pulling power of the tractor as well. The tractor equipped with a **JAKE Boom Support** gains the pulling power even more by sharing the crane weight partly onto the front wheels.

The **JAKE 900** makes using the crane versatile as the crane mounted on the tractor can be combined with other devices connected to a 3-point linkage and a trailer hitch usually with no limits (except for parallel cranes).

* Choose JAKE 804 or 904 for Valtra N4 and T4.
